

Infection protection & hygienic support

FOR SAFE EVENTS

IMAGINATION WITHOUT LIMITS

BE SAFE AND STAY HEALTHY

We create **concepts of measures**

Infection protection & hygienic support

An effective infection control and hygiene concept is now urgently required to be able to hold an event at all. Procedures must comply with local regulations (e.g. requirements of the federal states/provinces and competent authorities).

Responsibilities must be clarified. Measures must be taken and compliance with them must be monitored. In addition, the

hygiene concept must be adaptable to pandemic conditions at any time. We provide professional support for these necessary tasks. During the preparation of an event, we look at each work step in relation to the risk of infection and evaluate it. Then we derive appropriate measures and create work instructions that provide the necessary protection. These action concepts are intended to:

Minimise the possibility of **infection** with the SARS-CoV-2 virus

Minimise the **spread** of the SARS-CoV-2 virus

Ensuring that all production processes and pending work can nevertheless be carried out with **as few restrictions as necessary**
